Executive summary

This document describes proposals for Building 1 ("BY1"), a standalone proposal for a riverfront, office-led mixed use scheme which will seamlessly slot into the wider Bankside Yards masterplan site (which was formerly occupied by Ludgate House and Sampson House) in the London Borough of Southwark ("LBS").

This proposal, also known as 'Building 1, Bankside Yards West' or 'BY1', is referred to as the 'Proposed Development' within this Design and Access Statement. The area of land which will be redeveloped is hereinafter referred to as 'the Site'

The Site context

The Site is situated in a prominent location on the River Thames, between Blackfriars Bridge and Blackfriars Railway Station, in the north-west of the Borough & Bankside ward in the London Borough of Southwark.

The Site is surrounded by a number of prominent historical and cultural landmarks, including the Tate Modern, Millennium Bridge and Thames Path. The northern part

of the Site forms part of the Thames Path.

The broader Bankside Yards West site is situated on the footprint of the former Ludgate House, to the west of the existing railway viaduct, which runs north-south. The wider area around the Site has been undergoing major regeneration in recent years.

The Site is very well connected within the public transport network, with the entrance to Blackfriars Station on the north-eastern edge of the Site, which offers access to the Circle and District lines, as well as Thameslink.

The Bankside Yards masterplan

The Site sits on the northern edge of the Bankside Yards West development - which will comprise a cluster of three buildings when developed - to the west of the existing railway viaduct. This masterplan received consent in 2014, with subsequent amendments made thereafter.

In relation to Bankside Yards East (which is situated on the footprint of the former Sampson House site), a standalone planning permission was granted in December 2020. If implemented this consent will be relied upon in place of any wider Bankside Yards masterplan

in relation to Bankside Yards East.

Both Bankside Yards West and Bankside Yards East are part of the wider Bankside Yards regeneration scheme, masterplanned by PLP.

Townscape view constraints

An extensive study of the Proposed Development's impacts on various strategic and local views has been carried out in collaboration with townscape consultant Tavernor Consultancy and visualisation specialist Miller Hare. This study is found within the Townscape Conservation and Visual Impact Assessment (TCVIA), provided in Environmental Statement (ES) Volume 2, which accompanies this planning application.

Design approach

The massing approach is a direct response to the opportunities and constraints of the Site, and the client brief. The approach is contextual and people-focused, making significant improvements to pedestrian connectivity through both levels of public realm.

The proposed building is divided into three distinct parts, to reflect internal layout and use. Office floors face north, towards the river, with the taller service core to the south. These floors will be a repeated linear stack, but with a clear focus on the north-west and north-east

corners, and the creation of double-height amenity spaces, which take advantage of the river aspect and views.

The base of the building is formed of three levels. The lowest level sits on the Thames Path, and includes a retail offer to the north and east. The office entrance is at upper ground level, which can be accessed from the upgraded and enhanced Rennie Garden.

Design evolution

The team has been involved in a number of meetings with planning and design officers at the London Borough of Southwark, between July and September 2021, as well as a Design Review Panel (DRP) in November 2021, which has been instrumental in the design development of the scheme.

A virtual public exhibition has been very useful in determining local opinions on the changes made since the consented scheme. Details of this are in the Statement of Community Involvement, which forms part of this planning application.

Layout and use

The Proposed Development comprises the erection of a lower ground, upper ground plus 17-storey building (plus two levels of

basement), which covers the following uses:

- Office (use class E(g)(ii) from upper ground level to level 17 (7,911m² Gross Internal Area [GIA])
- Flexible retail (use class E (a) and (b)) on lower ground floor (302m² GIA)
- Plant and Ancillary spaces (5,748m² GIA)

Building 1, Bankside Yards West ("BY1") has been designed so it can come forward independently, save for where there are interactions with the overall masterplan, which are necessary for its function. The Proposed Development will dovetail seamlessly with the existing Bankside Yards West planning permission to "slot-in" to the wider Bankside Yards redevelopment.

Building envelope and appearance

The facade design focuses on form and proportion, using high-quality, durable materials that will stand the test of time. The articulation of the elevations responds to the building's internal structure and focuses on a clear orthogonal grid, within which alternating double-height amenity corners provide an identity to the scheme and allow the building to address the river. The east and west elevations have been detailed to respond to the sun's path, in turn reducing the cooling required within the building.

The public realm

The strategy and design for the public realm have been undertaken by Gillespies Landscape Architects.

The approach builds on the principles set out in the original masterplan, with enhanced connectivity through the wider area and the creation of a strong identity and character.

The Site of the Proposed Development is surrounded by public realm on all four sides at the base of the building. The materials and design complement the adjacent architecture and heritage assets. The Thames Path is widened, with improved opportunities to access the water.

The Proposed Development includes not only the building envelope but also the surrounding connected landscaping so that the application creates a holistic approach. This ensures the proposed BY1 delivers associated landscaping with the delivery of the building itself.

Sustainability

BY1 seeks to make the most of every opportunity to improve the environmental impact of the development. The project

embraces the principles of the circular economy and is part of Bankside Yards – Central London's first major mixed-use regeneration scheme with zero emissions and all-electric systems.

The project will enhance the urban greening and biodiversity on the Site. It has given careful consideration to the health and wellbeing of the occupants, as well as the impact on the local community.

Access and servicing

The Site is in a highly accessible location by sustainable transport modes, being situated adjacent to Blackfriars Station's southern entrance, with a PTAL of 6b (excellent) and direct access to the Thames Path and to Cycleway 4 along Blackfriars Road.

The design has been developed to encourage walking and cycling for local trips and cycling and public transport for longer journeys.

Inclusive access

The Proposed Development has been designed to meet the needs of all potential users regardless of disability, age or gender, and has been guided by all relevant inclusive design standards.

Conclusions

Building 1, Bankside Yards West will play a key role in defining the sense of arrival, from the north of the river, to the wider Bankside Yards development. The building has a strong relationship with the Thames, and its design is inspired by its riverfront location. We believe the building is of its place, with a unique design approach that positively contributes to its surroundings and creates an exemplary workplace.

Consented scheme

The Site-wide full planning permission was secured by PLP Architecture in March 2014 (12/AP/3940) (as amended). Below are details of the consented scheme for the Site (previously referred to as Ludgate House A, or LH-A), which remained unchanged during the subsequent planning amendments.

The consented scheme, Ludgate House A, comprised:

- 13 storeys
- Roof level: 56.80m AOD
- Lift motor room top: 62.08m AOD
- 17 residential units (14 x 2-bed; 3 x 3-bed)

Introduction

This project will create a high-quality, sustainable office-led mixed-use scheme. The scheme celebrates the Site's riverfront location and maximises the opportunities with public realm around all sides of the building. The lower ground level will house retail space. Above will be high-quality workspace, 10% of which will be affordable office space.

The design has looked to respond to the surrounding context, office amenity and wider Bankside Yards masterplan. The scheme has evolved through extensive consultation with Southwark Council, stakeholders and the local community. Feedback from the consultation meetings has been taken into account as the design has progressed.

The project looks to deliver a genuinely 'green' development. It is set within the UK's first fossil fuel-free major mixed-use development, makes significant urban greening contributions, and has wider public benefits. This is helping deliver a masterplan that sets a new benchmark for sustainability. The Proposed Development will be a new building in this masterplan that works well for people, place and planet.

Scope of this document

This Design and Access Statement responds to the requirements of Article 9 of The Town and Country Planning (Development Management Procedure) (England) Order 2015. The 2015 Order states that planning applications, with some exceptions, are to be accompanied by a Design and Access Statement which explains the design principles that have been applied to the development and illustrates how issues of access are addressed.

This Design and Access Statement is submitted to support the detailed application for planning permission for Building 1, Bankside Yards West. It describes the proposals for the scheme and the surrounding public realm, and should be read in conjunction with the application drawings.

A number of the elements of the design – including particulars of the cladding, materials, lighting, security and signage – will be finalised at the technical design stage and will therefore be the subject

of planning conditions to be agreed with Southwark London Borough Council. Where these details are shown within this Design and Access Statement, they are included for illustrative purposes only.

The document is structured and written using guidance in the Commission for Architecture and the Built Environment's 2006 document entitled 'Design and Access Statements: How to write, read and use them', and Section 3 of the Department for Communities and Local Government Circular 01/2006. It also responds to DCLG's proposal to streamline the planning process, which includes a simplification of the required content of Design and Access Statements, dated June 2013.

This report represents the work of the whole design and development team involved in the project. This Design and Access Statement is intended to be read with the supporting specialist reports.

The Proposed Development is referred to in this application as 'Building 1, Bankside Yards West' or 'BY1'. The document is structured into the following sections:

Chapter 01 – Site context

This section describes the setting of the proposal, its urban location and its relationship to surrounding historic context.

Chapter 02 – The Bankside Yards masterplan

This section provides an overview of the consented masterplan proposal.

Chapter 03 – Townscape view constraints

This section outlines the townscape views relevant to the Site and the proposal.

Chapter 04 – Evaluation

This section assesses and evaluates the Site and surrounding context.

Chapter 05 – Design approach

This section describes how the scheme has developed into the application proposals.

Chapter 06 – Design evolution

This section describes how the scheme has developed into the application proposals through a process of stakeholder and community consultation.

Chapter 07 – Layout and use

This section focuses on how the building is set out on a floor-by-floor basis.

Chapter 08 – Building envelope and appearance

This section explains the appearance of the building in their detailed form, and shows how they relate to their surroundings.

Chapter 09 – The public realm

This section illustrates how the design proposals integrate with the surrounding environment.

Chapter 10 – Sustainability

This section describes the performance standards adopted for the proposed building and how these will be met.

Chapter 11 – Access and servicing

The section outlines the pedestrian and vehicular access to the Site, refuse storage, car and bicycle parking, and facade access.

Chapter 12 – Inclusive access

This section outlines the measures adopted to ensure the development is accessible to all members of society.

Chapter 13 – Conclusions

This section provides a brief conclusion to the Design and Access Statement.

The brief

The brief for the Proposed Development was developed during the early stages of the project, and sought to create a scheme with the following criteria and credentials:

- Delivering an office-led mixed-use building on the Site of the consented LH-A building, providing around 7,900m² Gross Internal Area (GIA) premium office workspace, in the form of a destination workplace offer.
- Using and embracing the riverfront location to create a building that fulfils the potential of this unique Site.
- Maximising views towards the river from the office floorplates.
- Targeting a high standard of sustainability in all aspects of the development.
- Developing a commercial offer that complements the other workplace proposals at Bankside Yards by utilising the riverfront location and creating a high-quality office offer.
- Positively contributing to the placemaking and landscaping strategy developed across Bankside Yards, and further contributing to enhanced connectivity into and from surrounding routes.
- Creating a building with a sense of identity, that acts as an introduction to the wider masterplan development, in particular when viewed from Blackfriars Bridge.
- Enabling future flexibility and adaptability across the design.
